

Multivalent Energy-Efficient CMOS Amplifiers and Data Converters for Signal Processing Applications

Thesis submitted in partial fulfillment of
the requirements for the degree of

DOCTOR OF PHILOSOPHY

by

Ashish Shirish Joshi

Enrollment No. D14029

Supervisors

Dr. Satinder Kumar Sharma

Dr. Hitesh Shrimali

SCHOOL OF COMPUTING AND ELECTRICAL ENGINEERING

INDIAN INSTITUTE OF TECHNOLOGY MANDI

June 2020

Declaration by the Research Scholar

I hereby declare that the entire work embodied in this thesis entitled “**Multivalent Energy-Efficient CMOS Amplifiers and Data Converters for Signal Processing Applications**” is the result of investigations carried out by me in the School of Computing and Electrical Engineering, Indian Institute of Technology Mandi, Mandi, Himachal Pradesh, India, under the joint supervision of **Dr. Satinder Kumar Sharma**, Associate Professor and **Dr. Hitesh Shrimali**, Associate Professor, School of Computing and Electrical Engineering, Indian Institute of Technology Mandi, Mandi, Himachal Pradesh, India.

I also declare that it has not been submitted elsewhere for the award of any degree or diploma. In keeping with general practice, due acknowledgments have been made wherever the work described is based on the findings of other investigators. Any omissions that might have occurred due to oversight or error in judgement are regretted.

Mr. Ashish Shirish Joshi

Declaration by the Research Advisors

It is certified that the entire work in this thesis entitled “**Multivalent Energy-Efficient CMOS Amplifiers and Data Converters for Signal Processing Applications**” has been carried out by **Mr. Ashish Shirish Joshi**, Enrollment No. D14029, under our supervision and guidance for the degree of Doctor of Philosophy in the School of Computing and Electrical Engineering, Indian Institute of Technology Mandi, Mandi, Himachal Pradesh, India.

To the best of our knowledge and belief, present thesis completed by **Mr. Ashish Shirish Joshi** fulfils the requirements of the Ph.D. ordinance of the Indian Institute of Technology Mandi, Mandi, Himachal Pradesh, India. It contains original work of the candidate and no part of it has been submitted elsewhere for any degree or diploma.

Dr. Satinder Kumar Sharma

Date:

Associate Professor

Place: IIT Mandi,
Himachal Pradesh, India

School of Computing and Electrical Engineering,
Indian Institute of Technology Mandi,
Mandi, Himachal Pradesh, India - 175075.

Dr. Hitesh Shrimali

Date:

Associate Professor

Place: IIT Mandi,
Himachal Pradesh, India

School of Computing and Electrical Engineering,
Indian Institute of Technology Mandi,
Mandi, Himachal Pradesh, India - 175075.

Acknowledgments

First and foremost, I am grateful to the almighty god for blessing me with strength, intelligence, patience, and courage to complete this PhD thesis. Next, I would like to thank my beloved parents for their unconditional love and strong belief in me. I could not have reached this stage without the freedom, the moral support, and the encouragement that they provided me throughout my life. I would like to take this opportunity to express my gratitude towards my dear grand parents for inculcating a part of their life experiences and wisdom in me. Their concern and care will always extend to the deepest of my heart. A small thank goes to my mischievous younger sister for being equally understanding. I also thank my uncle and aunt for their words of advice during my stay in Pune where, I got introduced to the word IIT in a real sense.

I sincerely thank my research supervisors Dr. Satinder Kumar Sharma and Dr. Hitesh Shrimali for their contributions of time, stimulating discussions, constructive criticism and valuable feedback on my research work at IIT Mandi. Apart from providing insightful suggestions on my work and encouraging me during rough periods of this journey, they made me realise the importance of punctuality and professionalism. Thanks to their invaluable guidance, I have developed ample technical as well as interpersonal skills. Here, I would like to extend a vote of thanks to Dr. Sharma for providing me with the unusual liberty to choose my own path and follow my own working style but, always watching over me as I progressed with this work.

I am thankful to Ministry of Electronics and Information Technology (MeitY), Government of India for funding my PhD and supporting the research work through Visvesvaraya PhD scheme for Electronics & IT, and SMDP-C2SD project respectively. I would like to acknowledge the help and cooperation from Dr. Rahul Shrestha, Dr. Kunal Ghosh, Dr. Atul

Dhar, Dr. Bharat Singh Rajpurohit and Dr. Anil Kumar Sao. I thank Semiconductor Laboratory, Department of Space, Government of India for fabricating my design. Support and cooperation of Mr. H. S. Jatana, Sci. G, Mr. Uday Khambete, Sci. SE, and the team from Semiconductor Laboratory are acknowledged. I am thankful to Prof. Shouri Chatterjee of IIT Delhi for providing access to test facilities and valuable expert comments during the chip testing.

Contributions of Ms. Indu Yadav, Ms. Shivani Sharma, Dr. Mahesh Soni, Mr. Dinesh Kumar, Mr. Vijender Sharma, Mr. Mohd. Ghulam Moinuddin, and Mr. Sumit Choudhary in various manners are acknowledged. Special thanks to Ms. Indu for helping me in network analysis and digital circuits; and also for taking care of ever empty stomach of mine as well as other lab mates during our busy times. Lastly, I want to thank all my friends, colleagues, and relatives and also express my apologies for not mentioning them here personally. I am thankful to all the people who helped me consciously or unconsciously, and also who didn't help me willingly or unwillingly, while I successfully completed this thesis.

Thank you !

Ashish

Abstract

The advancement of technology has ushered a higher demand for wireless, portable and wearable internet-of-things devices in health monitoring, medical imaging, environmental sensing, communication, agricultural and several other industrial sectors. Analog signal processing (ASP) is an important aspect of various integrated systems that are required in these applications. Miniaturized technology for system design, power dissipation, noise performance, and area consumption are identified as the major challenges for implementing an ASP system. This thesis work addresses the performance-limiting design trade-offs in the amplifier and analog-to-digital converter (ADC) components of the ASP by concentrating on the analysis, design, and implementation of multivalent and configurable circuit techniques that can ameliorate area, noise, and energy efficiencies of the ASP systems.

A low noise chopper amplifier with discrete time parametric amplifier (DTPA) as the signal demodulator is demonstrated using the chip taped-out in a standard 180 nm CMOS technology. The DTPA demodulator enables 8 dB gain enhancement during down-conversion of the chopped signal without compromising on the input impedance and area of the capacitively coupled amplifier in low-frequency data acquisition. Simultaneous concerns between power consumption, unity-gain bandwidth (UGBW) and settling accuracy of an operational transconductance amplifier (OTA) used for medical imaging applications are also addressed herein. A methodology to improve the UGBW and phase margin of a high-speed gain boosted OTA with a positive feedback capacitor across the auxiliary op-amp is presented, and 17 % improvement in 0.01 % settling time is demonstrated based on the presented symbolic analysis. Moreover, a reduced switching activity mode for a successive approximation register (SAR) ADC is developed to minimize power dissipation in the case of multi-sensory applications. Elimination of dispensable switching activity using a temporal reference and maximum design simplicity imposed on the ADC architecture provide easy configurability for the low frequency operation. A secondary switch-and-compare method to generate a supplementary least significant bit is described as well. The technique improves the figure-of-merit of the proof-of-concept SAR ADC with minimal power and area overhead.

Keywords: *Circuit design and analysis, amplifier, data converter, data acquisition front-end.*
