

Experimental study on thermal energy harvesting using ferroelectric materials

A Thesis

Submitted
By

MANISH VAISH (ERPS1301)

For the award of degree of

Master of Science (by research)

SCHOOL OF ENGINEERING

INDIAN INSTITUTE OF TECHNOLOGY MANDI

Mandi, Himachal Pradesh -175005

February, 2018

Dedicated to

my teachers

and

Family

Declaration by the Research Scholar

This is to certify that the thesis titled “**Experimental study on thermal energy harvesting using ferroelectric materials**” submitted by me, to the Indian Institute of Technology Mandi for the award of the degree of **Master of Science (by research)**, is a bona fide record of the research work carried out by me in the School of Engineering, Indian Institute of Technology Mandi, under the supervision of Dr. Rahul Vaish and Dr. Vishal Singh Chauhan. The contents of this thesis, in full or in parts, have not been submitted to any other Institute or University for the award of any degree or diploma. In keeping with the general practice of reporting scientific observation, due acknowledgements have been made wherever the work described is based on the findings of other investigators.

Preamble

Ferroelectrics form an important class of materials and are employed for a variety of applications. These materials have ability to convert thermal energy into electrical signals which is known as pyroelectric effect. Pyroelectric materials are the one of the most important class of electronic materials after semiconductors and are slowly gaining momentum in various novel applications. This has allowed them to break free of the traditional applications of sensors to novel technologies like thermal energy harvesting. It is an established fact the pyroelectric behaviour is a function of the domain response/switching behaviour when subjected to thermal gradient. The present study is based on waste heat energy harvesting using pyroelectrics ($\text{PbZr}_x\text{Ti}_{(1-x)}\text{O}_3$ (PZT-5H)) and other lead-free ceramics. In order to harvest optimum energy from pyroelectric materials, different electrical circuits (parallel and series SSHI (synchronized switch harvesting on inductor)) have been used. They provide nonlinear processing of pyroelectric voltage which leads to synchronization between temperature gradient and charge extraction.

The results obtained in the present investigations have been compiled in the four chapters as follows:

Chapter 1 summarizes the introduction of thermal energy harvesting and method which has already explored in the field of thermal energy harvesting. Pyroelectric effect and ferroelectric materials are also described the later part of chapter.

Chapter 2 discussed the objectives of the thesis and argued some of the important literature on pyroelectric energy harvesting.

Chapter 3 includes the experimental results of energy harvesting using hot/cold oil bath and radiation heating. PZT was used in this work to harvest thermal energy from radiation as well as from hot oil. The extracted charges were stored into different values of capacitors and power output was calculated across the load resistance

In Chapter 4, the results obtained from energy harvesting from PZT-5H, $\text{Ca}_{0.15}(\text{Sr}_{0.5}\text{Ba}_{0.5})_{0.85}\text{Nb}_2\text{O}_5$, and $(\text{Ba}_{0.85}\text{Ca}_{0.15})(\text{Zr}_{0.1}\text{Ti}_{0.89}\text{Fe}_{0.01})\text{O}_3$ ceramics have been explained and harvested electrical energy was stored in the capacitors. The voltage is also calculated at different values of frequency and the effects of these frequencies have been discussed in this chapter. A comparative study has been done on exploring thermal energy harvesting potential in various class of materials like $\text{Ba}_{0.9}\text{Ca}_{0.1}\text{TiO}_3$ (BCT), $\text{Sr}_{0.5}\text{Ba}_{0.5}\text{Nb}_2\text{O}_6$ (SBN), $[\text{Bi}_{0.48}\text{Na}_{0.4032}\text{K}_{0.0768}]\text{Sr}_{0.04}(\text{Ti}_{1-x}\text{Nb}_{0-x})\text{O}_3$ (BNT-Nb), $\text{Ba}_{0.85}\text{Ca}_{0.15}\text{Zr}_{0.1}\text{Ti}_{0.9}\text{O}_3$ (BCT-BZT) and $\text{Ba}_{0.85}\text{Sr}_{0.15}\text{Zr}_{0.1}\text{Ti}_{0.9}\text{O}_3$ (BST-BZT) pyroelectric ceramics. BCT ceramic has been explored at different frequency through SSHI circuits and compared to a standard circuit. The thesis concluded by summarizing the key findings of the investigation and highlighting the results. This research is expected to greatly benefit the field of integrated Micro-Electro-Mechanical-Systems (MEMS) and low power electronics devices. The following publications are largely based on the studies conducted as a part of the research work reported over here.

Acknowledgements

At the outset I would like to express my gratitude to my research supervisors Dr. Rahul Vaish and Dr. Vishal Singh Chauhan for their supervision, advice and guidance. It was Dr. Vaish and Dr. Vishal who discovered my aptitude for research early on and put in the necessary effort to groom me and help me to deliver my best. Everything that I am today I owe to their meticulous support and counseling. They have helped me not only with my academics but also through all walks of my life. I have always had their support and encouragement whenever I needed it the most. I have also largely benefited from their scientific intuition, vast knowledge of the subject and rich experience. I am forever indebted to them for everything I am today and for whatever I will achieve in my time to come. It has been a pleasure working with them.

I would also like to extend my thanks to the faculty at IIT Mandi for their teachings and guidance. I would like to especially thank Dr. Rajeev Singh, Dr. Sudhir Kumar Pandey, Dr. Atul Dhar and Prof. Subrata Ray for having taught me the necessary courses to help me progress with my research.

I also wish to acknowledge the members of my doctoral committee for their critical appraisal of my research and annual progress.

Much of my efforts would not have been successful without proper help and support from my adorable lab-mates. Mr. Aditya Chauhan, Dr. Himmat Singh Kushwaha, Mr. Manish Sharma and Dr. Satyanarayan Patel. You served as my family away from home.

Words are not enough to express the gratitude that I feel towards my family. I would like to thank ABB India Ltd. And my co-guide Mr. Arun Kumar Dwivedi for giving me their support and guidance to complete my M.S at IIT Mandi.

Once again I'd like to thank everyone involved for making my stay at IIT Mandi a spectacular and memorable experience.

Thank you all.

MANISHVAISH
