

**Study of electronic transport properties of transition
metal tellurides: Cu_xPdTe_2 ($x = 0, 0.04$), ZrTe_3 and ZrTe_5**

A Thesis

submitted by

Mandeep Kumar Hooda

(Reg. No. D13019)

for the award of the degree of

Doctor of Philosophy

School of Basic Sciences

Indian Institute of Technology Mandi

Kamand, Himachal Pradesh-175005, India

December, 2018

Dedicated to
my family members

Late Nihal Singh Hooda (grandfather)

Jaswant Singh Hooda (father)

Mayapati Punia (mother)

Monika Hooda (sister)

Dinesh Hooda (brother)

Declaration	<i>i</i>
Acknowledgement	<i>iii</i>
Glossary of symbols and acronyms used in this thesis.....	<i>v</i>
List of figures	<i>xi</i>
List of tables	<i>xvi</i>
Chapter – 1	1
1. Introduction	1
1.1 Charge density wave	2
1.2 Superconductivity	4
1.3 Topological insulator	6
1.4 Our chosen systems	8
1.4.1 Transition metal di-tellurides: Cu intercalated PdTe ₂	8
1.4.2 Transition metal tri-tellurides: ZrTe ₃	11
1.4.3 Transition metal penta-tellurides: ZrTe ₅	14
1.7 Outline of the thesis	16
References.....	18
Chapter – 2	29
2. Sample synthesis methods and characterization techniques	29
2.1 Sample synthesis techniques	29
2.1.1 Solid state reaction route method	29
2.1.2 Methods for single crystal growth	30
2.1.2.1 Chemical vapor transport method	30
2.1.2.2 Physical vapor transport method	32
2.1.2.3 Flux method	32
2.2 Characterization techniques	33
2.2.1 Powder x-ray diffraction	33
2.2.2 Energy dispersive x-ray spectroscopy	34
2.2.3 Electronic transport measurements	34

2.2.3.1	Electrical resistivity.....	35
2.2.3.2	Thermal conductivity.....	36
2.2.3.3	Seebeck coefficient.....	37
2.2.3.4	Hall Effect.....	38
2.2.3.5	Heat capacity.....	39
2.2.4	Magnetic measurements	41
2.3	Resistivity measurement set-up.....	42
2.3.1	Design.....	42
2.3.2	Electronic control unit.....	44
2.3.3	Measurement control and automation.....	45
2.4	Density function theory.....	45

Declaration by the Scholar

I hereby declare that the entire work embodied in this thesis is the result of investigations carried out by me in the **School of Basic Sciences**, Indian Institute of Technology Mandi, India, under the supervision of **Dr. C. S. Yadav**, and that it has not been submitted elsewhere for any degree or diploma. In keeping with the general practice, due acknowledgements have been made wherever the work described is based on finding of other investigators.

Acknowledgement

Mother Nature is the great which have blessed human beings to look into her dynamics. Nature endlessly immensity and minuteness is difficult to understand. Being very tiny creature and integral part of nature, I feel very blessed at least to have some glimpses of nature mysteries. I am very wholeheartedly grateful to all those great physicists, chemists, biologists who have dedicated their whole life to understand nature mysteries and have inspired and guided many like me to choose the path of physics. Here it is not possible to name these great masters. Therefore only those are acknowledged who have either contributed to this work or motivated me while carrying out the presented research work.

First and foremost, I am very grateful and indebted to my supervisor, Dr. C. S. Yadav for his continual and unconditional support, guidance and motivation for the accomplishment of the research work carried out by me at IIT Mandi. He is who has introduced me to the world of condensed matter physics and has greatly influenced my way of thinking about scientific problems and their solutions. He not only gave me the freedom of doing the things in my own way but also helped me to maintain the courage in odd circumstances.

I would like to express my sincere appreciation to my doctoral committee members, Dr. Ajay Soni, Dr. Kaustav Mukherjee, Dr. Aniruddha Chakraborty and Dr. Atul Dhar for their valuable suggestions, guidance, encouragement and support during the accomplishment of this work.

I highly appreciate my lab members for their constant help and support in various lab activities. I am especially grateful to my senior Mohit Kumar Sharma, who has helped me a lot at various occasions both technically and academically. The constant help and cooperation from my lab friends – Karan Singh, Sonu Chhillar, Niraj Singh, Shailja Sharma, and Gurpreet Kaur is highly appreciable and unforgettable. I would like to extend my thanks to mathematics scholars Atendra Yadav and Vikas Kharwar for the different kind of help and moral support.

I am grateful to Prof. T. A. Gonsalves, Director, IIT Mandi, for his help and support during my tenure in the institute. I also thank the office staff members Mr. Sumeet, Mr. Sushil Kumar Pal, Ms. Stuti, Ms. Sushma, Mr. Kuldeep, Mr. Monu, Mr. Prakash, Mr. Manoj, Mr. Suneel,

Mr. Pawan, Mr. Anoop and Mr. Prateek for their support. I am also very thankful to Mr. R. S. Raghav and his team for help in instrumentation work.

I acknowledge the Indian Institute of Technology (IIT), Mandi for providing me financial support and Advanced Material Research Centre (AMRC) for experimental facilities required for completion of this work. I also sincerely thank Prof. A. K. Rastogi, Jawaharlal Nehru University, Delhi for the sharing his valuable knowledge and encouraging me doing condensed matter physics.

This thesis will be incomplete without acknowledging my past science teachers Dr. Nawal Kishore, Dr. Rajender Kundu, Dr. Dilip Singh, Dr. Naresh Lal Dalal, Shri Jagdish Saini and my friends Dr. Ashok Kumar, Gaurav Oberoi (writer, motivator, debater), Sanjay Mandyal, Pranab, Krishan (philosopher and cinematographer), Krishan Indora (cinematographer), Devika Rana (late), Pawan Yadav, Deepika, Sarita Saroha, Monika Sharma, Kanta Maan, Rohtas Naukhwai, Pappu, Birender Singh, Deepu, Ashish Tiwari, Jitender, Aamir, Hanuman Sen, Ajay Singh and Adil Usman. Very exciting discussions and debates with my best friend Gaurav Oberoi on wide range of topics in different areas of physics, chemistry, mathematics, biology, neuroscience etc. not only motivated me regarding my research work but also helped me to appreciate research happening in areas other than physics.

Finally, I express my gratitude to my family members for their unconditional love, faith, support, patience and encouragement in my life journey. My father Shri Jaswant Singh and grandfather Shri Chaudhary Nihal Singh Hooda have been great source of motivation for me since my childhood. Whatever I have achieved in my life till now, it was almost impossible without their constant efforts and support. This work is no exception without their moral support.

Mandeep Kumar Hooda

Glossary of symbols and acronyms used in this thesis

Symbols

k_F	Fermi wavevector
q	phonon wave vector
Δ	energy gap
g	dimensionless coupling constant
v_F	Fermi velocity
ρ_0	charge density in absence of CDW
ϕ	phase
ρ_l	amplitude and electronic energy gap of CDW
$\chi(q)$	Lindhard susceptibility or response function
T_C	superconducting transition temperature or critical temperature
H_c	critical magnetic field
$H_C(0)$	critical field at 0 K
$N(E_F)$	electronic density of states at Fermi level
$\langle \omega \rangle$	average phonon frequency
θ_D	Debye temperature
V	electron-electron interaction parameter
μ^*	Coulomb repulsion parameter
λ_{el-ph}	electron-phonon coupling constant
$F(\omega)$	phonon density of states
$\alpha^2(\omega)$	average electron-phonon interaction
M	ionic mass
$\langle I^2 \rangle$	electron-phonon interactions over Fermi surface
γ	electronic specific heat coefficient
$N_{bs}(E_F)$	bare density of states
κ_{GL}	Ginzburg-Landau parameter
λ_L	London penetration depth
ξ	coherence length
zT	figure of merit
