Name of the Co-Guide: Dr. Syed Abbas

Date:

Declaration by the Research Scholar

I hereby declare that the entire work embodied in this thesis is the result of investigations carried out by me in the **School of Basic Sciences**, Indian Institute of Technology Mandi, under the supervision of **Dr. Muslim** (Guide) and **Dr. Syed Abbas** (Co-Guide) and that it has not been submitted elsewhere for any degree or diploma. In keeping with the general practice, due acknowledgments have been made wherever the work described is based on the finding of other investigators.

Place: IIT Mandi

*“Gratitude is born in hearts that take time
to count up past mercies”*

–Charles E. Jefferson

First of all and foremost, I would like to express my humble and honest gratitude to my thesis supervisor Dr. Muslim and co-supervisor Dr. Syed Abbas, School of Basic Sciences, Indian Institute of Technology Mandi for their expert guidance, valuable suggestions and continuous support throughout my research work. I am extremely thankful to Dr. Muslim for his moral support, invaluable encouragement and constant support for me. His great enthusiasm and knowledge introduced me to the interesting and challenging field of infinite-dimensional differential equations. I highly appreciate his support and help during the entire research work and the way he has guided me to become an independent researcher. I am also grateful to Dr. Syed Abbas for his details and constructive comments on the thesis and his invaluable support throughout this work.

I am also grateful to the other members of my doctoral committee: Dr. Rajendra K. Ray, Dr. Manoj Thakur and Dr. Atul Dhar, for their valuable suggestions. I acknowledge Prof. Amar Debbouche from Algeria and Prof. Rathinasamy Sakthivel from India, for their collaboration.

Furthermore, I appreciate the support and help given by the Director of IIT Mandi, Prof. Timothy A. Gonsalves. Also, I would appreciate the support and help provided by staff members of IIT Mandi. I would like to extend my thanks to the colleagues in our research group, Dr. Avadhesh, Dr. Swati, Shekhar, Vipin, Soniya, Manoj, Subhash and Anil. Special thanks to Dr. Atendra, Pravat, Sudeb, Vikas, Nishith, Sourabh, Pawan, Amarjit, Bhisham,

Gaurav, Ishtiyag and Dauood for their friendship and great memories. I am highly indebted to my wonderful friends Shekhar, Sudeb, Vikas, Sourabh and Pawan for their continuous support and motivation during the tough time in my life.

I take this opportunity to thank my well-wishers Krishan Kumar, Ram Krishna Verma, Vineet Kumar Chaurasiya and Alka Dangi for their encouragement and stimulation that they provided during the entire tenure of my research work.

Financial support from MHRD is also greatly acknowledged.

It was because of my parents I came to this world, hence they are the reason for all my achievements. For their unconditional love, support and motivation throughout my life, I owe my deepest gratitude to my parents Mr. Hukma Ram Dhayal and Mrs. Sita Dhayal. I wish to express my heartfelt gratitude and thanks to all my siblings especially my eldest brother Mr. Prashant Dhayal for their love and encouragement to boost my morale and confidence during the entire period of this work. I do believe that without the consistent help of my parents and ardent support of my brother, this work probably would have not seen the ray of the day.

Finally, thanks to Almighty for the kind blessings.

Rajesh Dhayal

ABSTRACT

Keywords: *Differential equations of integer and non-integer order, Stochastic differential equations, Mild solutions, State-dependent delay, Non-instantaneous impulses, Semigroup theory, q -resolvent family, Banach fixed point theorem, Krasnoselskii's fixed point theorem, Schauder's fixed point theorem, Existence, Stability, Controllability, Existence of optimal controls, Optimal pair, Approximation results.*

The present research work deals with the investigation of various kinds of deterministic and stochastic differential equations in finite as well as in infinite-dimensional spaces. This work provides insight into the different types of controllability, existence, uniqueness, stability and existence of optimal controls for non-instantaneous impulsive differential equations of order one, two and non-integer. We establish the controllability of non-autonomous nonlinear differential equations with non-instantaneous impulses in the space \mathbb{R}^n by using a new piecewise control function. Also, some significant results on various kinds of controllability for fractional differential equation with non-instantaneous impulses and state-dependent delay have been investigated. Further, we establish necessary and sufficient conditions for the existence, uniqueness, stability and controllability of non-instantaneous impulsive stochastic differential equations driven by mixed fractional Brownian motion with Hurst parameter $\mathcal{H} \in (1/2, 1)$. Next, we study the approximate controllability for a class of non-instantaneous impulsive fractional stochastic differential equation driven by fractional Brownian motion in a Hilbert space. The existence of mild solutions and optimal controls for a new class of second-order stochastic differential equation driven by mixed fractional Brownian motion with non-instantaneous impulses have been established, which has not been proposed so far to the best of our knowledge. Finally, we discuss the optimal control problem for a system governed by fractional differential equation in a real Hilbert space. The optimal pair is obtained as the limit of the optimal pair sequence of the unconstrained problem and also, we derive some approximation results, which guarantee the convergence of the numerical method to optimal pair sequence. Several examples have been provided in order to make our theoretical analysis more concrete. In this work, the main techniques used are fixed point theorems, semigroup theory, q -resolvent family, fractional calculus and stochastic analysis theory.
